EXPERIENCIA/CARRERA

Sngular

— Data-analyst
oct 2018 — HOY (5 años y 4 meses)

QUADRAM | Mobile Solutions

— App Developer
mar 2018 — sept 2018 (7 meses)

API development for 'Tappear' app using Laravel and VueJS.

Roles performed: database design and table relationships, development of endpoints for the app's functionalities, creation of a control panel using VueJS.

Presentación

Phycisist, once I finished my degree, I gravitated towards the tech sector because it always seemed to me to be the closest thing to 'problem-solving.' I soon started as a COBOL-CICS-DB2 programmer, first at Coritel and later at Mnemo, during the years 2014 to 2016.

I set aside COBOL to study more current and demanded technologies, working as a PHP-Laravel backend developer, both in web development and APIs design for mobile apps, as well as in database design.

Starting in 2020, I aimed to combine my experience as a developer with the analytical skills I had gained during my Physics studies, seeking projects related to Data Analysis, primarily working with Python.

In the professional realm, I define myself as an active person who loves to learn new things every day and take on challenges.

In my free time, I am passionate about rock climbing and exploring new routes on my bicycle.
